01. General

Tailoring to all possible needs, we offer 3 main connection solutions to seal off your system! This includes, basic glues, factory prefabricated connections, and our heat plate tool to prefab-it-yourself at the speed of light!

The heat plate provides a polyfusion welding technique for tubular Thermaflex insulation material. Delivering a solid and homogenous joining for the prefabrication of insulation fittings on-site or in your workshop as preparation.

Simple process:
- The welding process is simpler than the use of glue.
- Standard tooling - heating element (standard butt fusion heating element with PTFE (Teflon) coating can be used)

Speed - Time saving:
- Very fast process compared to glue up to ID 114mm tubular insulation
- Enormous time savings due to prefabrication of standardized fitting insulation and specific fitting insulation with tubular insulation

Solid welding connection:
- Homogenous polyfusion welding process, glue free!

Sustainability:
- Environmental friendly joining technique
- No additional adhesive
Solidifying your system
Craftmanship in the forefront

Connections are often the most vulnerable and time-consuming part of an insulation system. So, when it comes to efficiently insulating an installation, the type of connections should be carefully considered. To tailor to all possible needs, we offer 3 main connection solutions to seal off your system: from your basic glues, to factory prefabricated connections, and a heat plate tool to prefab-it-yourself at the speed of light.
02. Prefab it yourself

Preparation

1. Heat up the heating element
   Heat surface to the temperature of 180°C.

   **Important!**
   Ambient temperature 5°C - 35°C

2. Length allowance
   For melting provide an additional length of +5mm to the original length of each fitting.

   **Important!**
   Respect the country specific health and safety regulations for working with high temperature electrical equipment.
3. Cut fitting segments

Cut fitting segments with the help of the Thermaflex cutting matt or mitre box in accordance to the figures beneath.

**Bends 90° and 45°**

- 45° cut → 90°
- 22.5° cut → 90°
- 15° cut → 90°
- 11.25° cut → 90°
- 22.5° cut → 45°

Pre-fabricating a 90° or a 45° bend involves a simple process.

**Step one:** Cut out V-shaped pieces.

**Step two:** Weld.

**T-piece 90°**

1. Find an additional piece of tube insulation of the same size; then cut both pieces to fit together like shown in figure 2 and weld.

2. Cutout V-shaped piece.

**Important!** For melting provide an additional length of +5mm to the original length of each segment.

**T-piece 45°**

1. Produce a 90° bend.

2. Cut the bend and the tube insulation to fit together like shown in figure 2 and weld.

**Step one:** Produce a 135° bend as shown in figure 1.

**Step two:** Cut the bend and the tube insulation to fit together like shown in figure 2 and weld.

Pre-fabricating a 45° T-piece involves a two-step process.
Joining

1. Melt fitting component interface
Press both components onto the heating element and follow the following sequence.

**Equalize surface:**
- Press: 1 second (equalize surface)
- Remove from heating element
- Press: 1 second (equalize surface)
- Remove from heating element

**Heat up surface:**
- Press: 1 second (heat up time)

**Important!**
Lightly press fitting components onto the heating element.

2. Joining
Join the two fitting components within 2 seconds (dwell time) after removing from the heating element and secure fittings by holding firmly with pressure for 3 seconds (welding time). After the welding process the two components are bound and homogenously joined.

**Important!**
After the welding process, carefully clean the heating element surface with a thick and dry paper cloth.
03. Welding process
Polyfusion welding of tubular polyolefin insulation

Heating element – Surface temperature 180°C

Ambient temperature 5°C - 35°C

Pressure [p]

Equalize Surface 1sec.

Equalize Surface 1sec.

Heat up 1sec.

Dwell time ≤ 2 sec.

Joining ≥ 3 sec.

Time [t]
04. Tools

The following tools are required for polyfusion welding of tubular insulation.

**Polyfusion welding**

但不限于 welding unit

**For solid and homogenous joining.**

Butt welding unit for polyolefin insulation with PTFE-coated heating element 230V, 50-60Hz according to DVS. Available with 110V. Temperature preset for polyfusion welding of Thermaflex® polyolefin tubular insulation at 180°C. Heating element Ø 200 mm and Ø 300 mm. Support stand.

**Knives & cutters**

**Specialized 25cm, and 12.5cm insulation knife set**

**For serious insulation functionality.**

The double insulation knife set has been developed for fast, efficient and comfortable cutting and shaping of Thermaflex® insulation. The 2 knives are accompanied by a locking safety holster, belt and lanyard to ensure maximum safety, and convenient transportation.

**Whetstone**

**Keep it sharp.**

A sharpening stone is included to keep your knives razor-sharp and ensure the best and smoothest possible cuts.
Measurement & marking

Talmeter (3m)
Measure it. Mark it. Craft it.
The ideal marking measure for insulation craftsmen. This white, impact-resistant steel tape measure has both millimeters and diameters, combining marking and measurement edges so you can quickly and simply measure and mark both internal and external lengths.

Cutting mat
Cut to fit.
Use our Thermaflex-designed cutting mat for optimal angular precision, covering all the cutting angles you need. Perfectly suitable for all your elbows, bends, T and Y pieces, you name it. The cutting mat is made for both right and left handed craftsmen.

Folding ruler
Unfolding precision.
Our folding ruler measures cm, inch and angular degrees all in one handy, compact tool.

Marker
Swift and sure.
Draw out exactly where you need to cut, shape, or carve with our black insulation marker.

Mitre box (optional)
Cut to fit.
Use the mitre box for optimal angular precision, covering all the cutting angles you need. Perfectly suitable for all your elbows, bends, T and Y pieces, you name it.
